

Use the following examples of Smart Motion alert rules as a guide when configuring your own alerts.

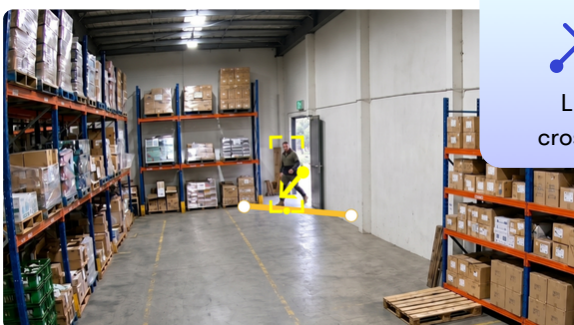

Purpose: Be alerted when vehicles park in disabled parking bays

Purpose: Be alerted when someone remains in an area longer than expected

Purpose: Be alerted when machinery leaves location

Purpose: Be alerted when people cross a perimeter

Tip: If the perimeter line is positioned near the edge or back of the camera view, the AI model may not have enough time to identify a person before they cross it. Move the line closer to the camera to improve detection accuracy.
